Welcome to the inaugural issue of *Microbiological & Immunological Communications*- a biannual, open-access, and peer-reviewed journal aiming to publish high-quality research articles in the field of basic & clinical microbiology and immunology. The journal covers topics such as clinical practice, education, research, policy, and technology in the field of microbiology and immunology. It strives to promote knowledge exchange and collaboration between researchers, clinicians, educators, policymakers, and other professionals in the microbiology and immunology community.

Microbiological & Immunological Communications, available online and in print, publishes scholarly input from the scientific and broader community related to the important themes in microbiological and immunological sciences. The journal emphasizes studies integrating the more expansive interdisciplinary fields of microbiology and immunology with hardcore evidenced based.

Microbiological & Immunological publishes studies investigating all aspects of the relationships between infectious agents (bacteria, viruses, fungi, etc.) and hosts. Clinical studies and investigations carried out at organismal, organ, and tissue levels can be

submitted to this journal; however, studies exploring cellular and molecular mechanisms are encouraged. Animal studies investigating molecular aspects of disease prevention, diagnosis, pathogenesis, and treatment, especially targeting their immunological aspects using *in vitro*, *in vivo*, and *in silico* tools, are also welcomed. The journal also publishes research in mycology and parasitology.

This journal aims to provide a platform to the scientific fraternity, especially regional and national academics, where they could get their studies published after a rapid, transparent, and high-quality peer review. All the articles published in *Microbiological & Immunological Communications* will be freely available to readers immediately after publication. The open-access policy of our journal is likely to increase the readership of articles and enhance their visibility and citation potential. Therefore, I invite you to submit your work to *Microbiological & Immunological Communications*. We look forward to receiving your submissions!
